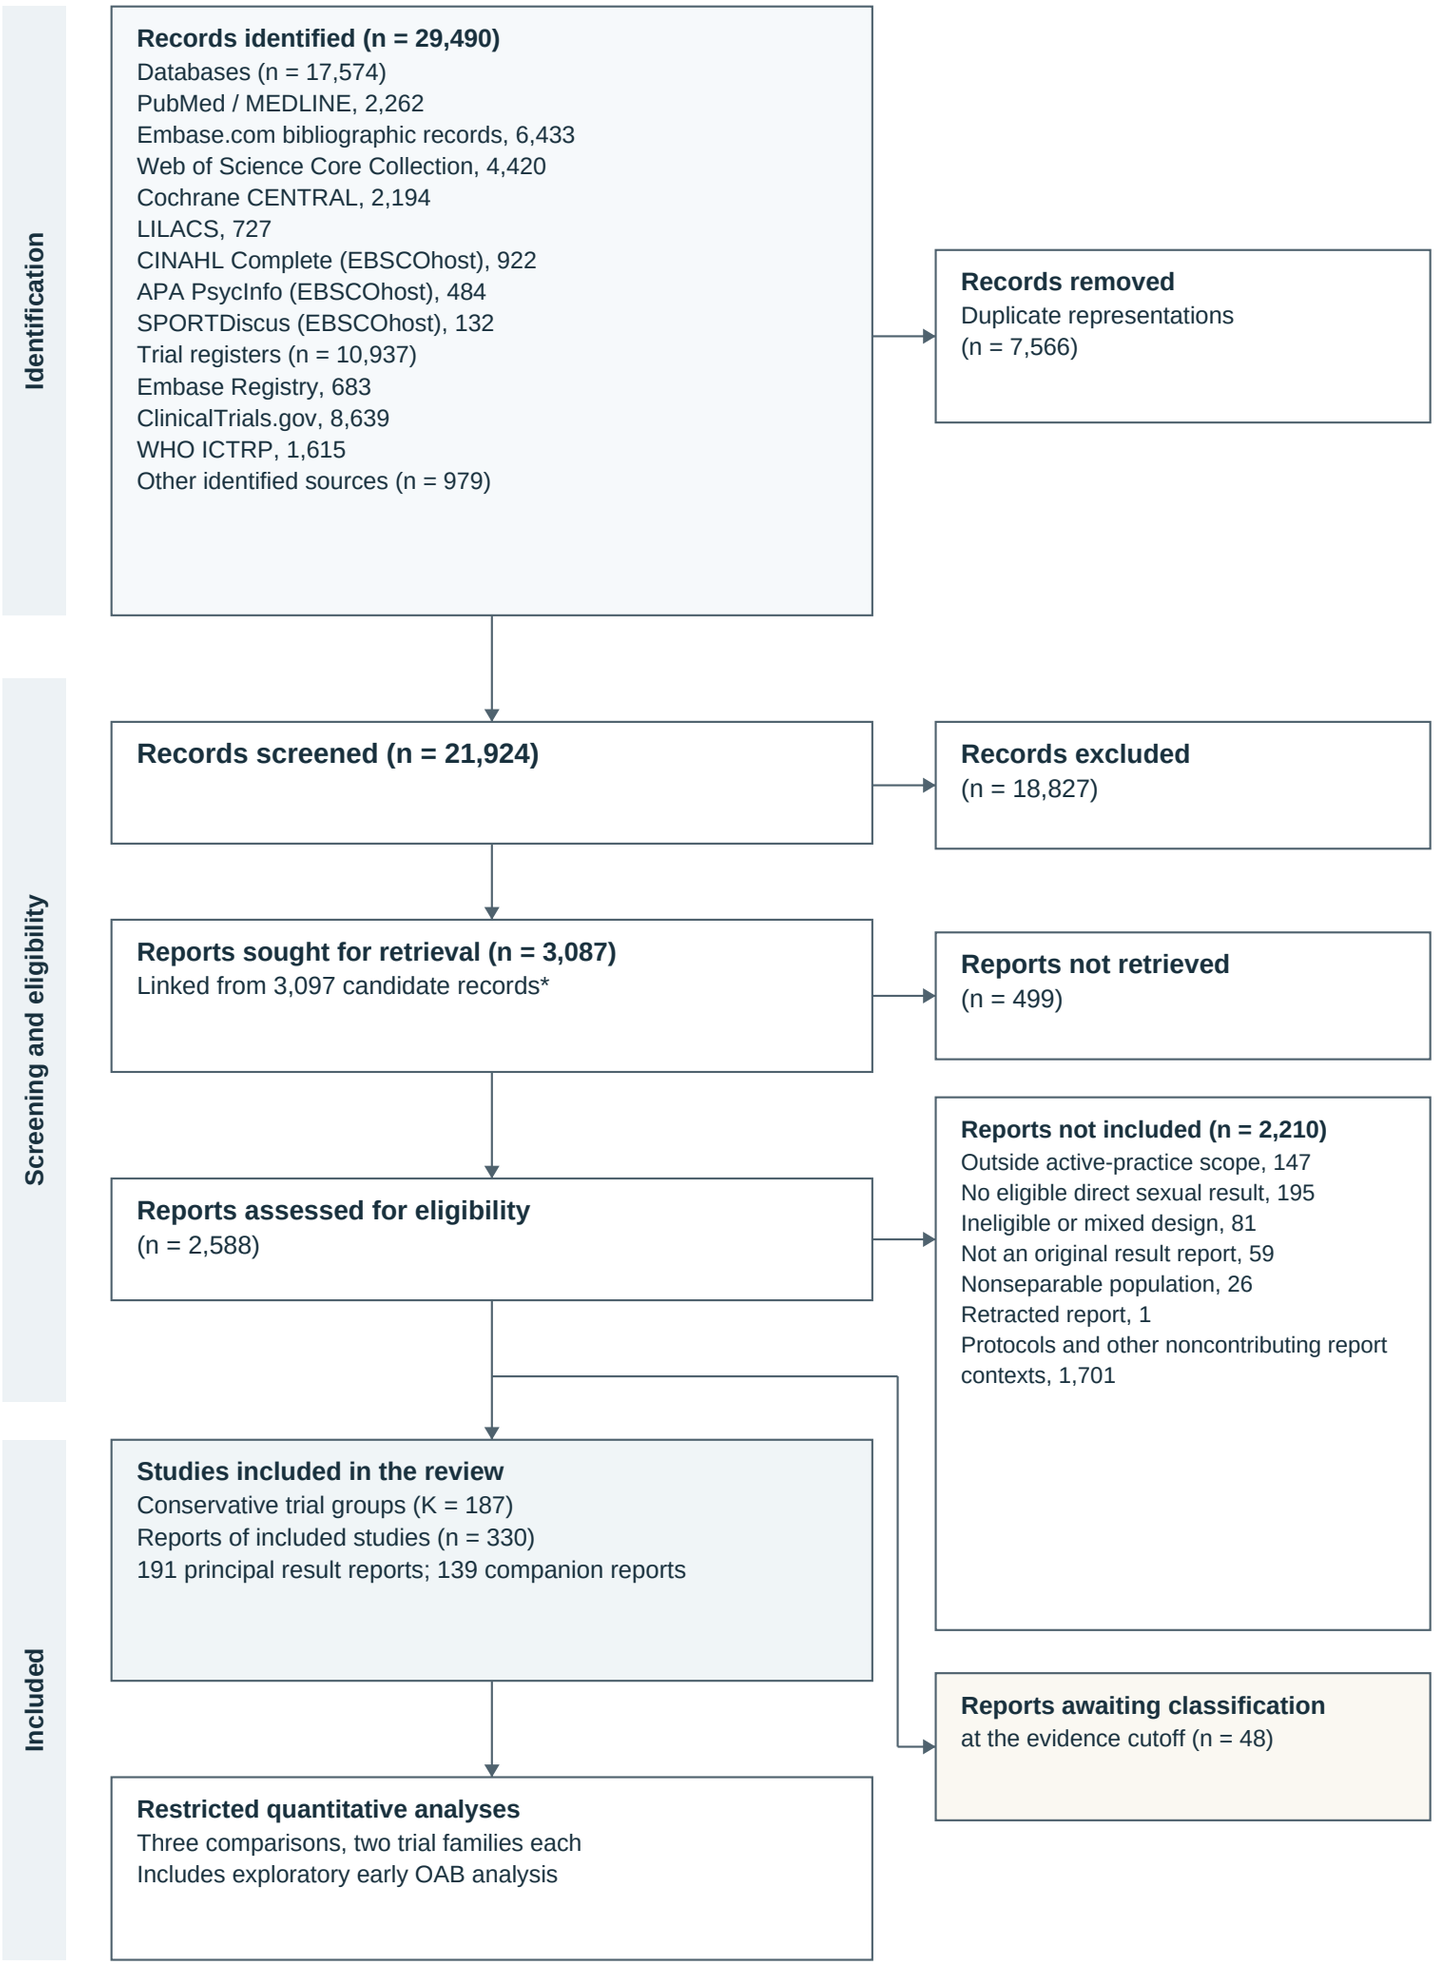
Figure 1 Study selection



* The record-to-report bridge resolves one proceedings container, four explicit multiple-report links, and 13 convergent links: 3,097 - 1 + 4 - 13 = 3,087. Details appear in S1.

The included count covers complete bodily-practice programmes and defined adaptive physical-task offers. It does not identify an isolated exercise component effect.

The conservative trial count groups potentially overlapping Yun reports once. A separate-Yun scenario gives 188 groups. Uncertain eligibility remains visible in the awaiting-classification branch.

Adapted from PRISMA 2020. Individual source scopes and report-level reasons are provided in S1 and S2.
